How to Deploy your project to Github

1. git init
2. git add .
3. git commit –m "First-checkin"
4. `git remote add origin https://github.com/FrugalfromUP/Resume.git`
5. git push –u origin main
6. `npm install -g angular-cli-ghpages`
7. ng build --output-path docs --base-href /Resume/
    or ng build --output-path dist --base-href /Resume/
8. git add .
9. git commit –m "Second-checkin"
10. git push –u origin main
11. Now just goto github repository refresh the page
12. now goto settings -> goto pages
13. build and deployment -> In source selct deploy from branch
14. In branch -> main or master and next box chose docs or dist then save
15. Now your project deployment is in progress
16. Till you can goto your repository -> goto environments click on github pages
17. Click on view deployment
18. Boom Now you can see your project .
